

Sustainability Working Group

Asset Management and Climate Adaptation

The HTMA Sustainability Working Group has created a central source of information on highways adaptation to meet the needs of climate change in the UK, which is accessible on the HTMA website.

It has been developed to share knowledge, best practice and build a library of case studies, to assist those responsible for appropriately managing the opportunities and risks associated to highways maintenance with the changing climate.

The site offers guidance on adaptation management protocols for climate change opportunities and risks, with practical tools to successfully deliver an efficient highways maintenance service that is robust and sustainable.
