

People Working Group

Statements on Occupational Health for Highways Maintenance Industry

The HTMA People Working Group has developed a range of occupational health statements that are outcome led. They define industry best practice and are set as HTMA guidance and standards to which each member company aspires to adopting and implementing into their businesses. The Association also encourages the members to exceed the objectives outlined in the statements, where possible, to continually improve industry working practices.

The documents undergo periodic review and are updated when required, to continue to raise the bar in line with developing best practice across the industry.

Drug & Alcohol and Mobile Phone Use statements have recently been updated. Similar statements on Working Time and Diversity have also been drawn up and will undergo continuous development and review.
